

Using Your Flask

For Best Results Always preheat or precool your flask before filling with your chosen drink.

To preheat or precool, fill the flask with hot or cold water and allow to stand for 1-2 minutes. Empty flask and fill with prepared drink to just below the stopper. DO NOT overfill.

If adding ice cubes or soup with meat pieces etc, it is possible to remove the flask top completely by unscrewing anticlockwise. Refit by screwing in clockwise direction until tight.

Ensure the pressure release valve is closed by pressing and releasing the button on the stopper (valve is closed when button is up).

Screw stopper down firmly, tilt flask over sink to check for leaking.

Place small cup on top of flask and screw large cup on until it clicks into position (cup handle aligned with carry handle).

Attach carry strap if required by simply pushing strap connectors into the slots, top and bottom of handle, until they click into place. Test strap is secure by gently pulling.

To remove the strap, squeeze the sides of the connector with thumb and forefinger to release the securing clips, and gently pull out.
